EXAMINER'S REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Independent claim 25 requires: scanning a first signal into a serial scan path in response to a scan clock signal and a mode signal', storing the first signal, which indicates desired protocol', comparing operating signals of functional circuits to compare signals', generating or detecting an event signal indicating a match', and performing circuit operation on the integrated circuit using the desired protocol. In the disclosed combination, the prior arts fail to teach the above.

Independent claim 41 defines a process of operating an integrated circuit. The process scans a first signal into a serial scan path on the integrated circuit in response to a scan clock signal and a scan mode signal. The process stores the first signal in a register on the integrated circuit. The first signal indicates a desired protocol. The process detects an event signal. In response to the event signal, the process performs an operation on the integrated circuit using the desired protocol.

Therefore, it is not clear that one of ordinary skill in the art at the time of the invention would have made the necessary modifications to the prior art of record to encompass the limitations set forth in the present application. Moreover, none of the prior arts of record, taken either alone or in combination, anticipate nor render obvious the claimed inventions. Hence, claims 25-56 are allowable over the prior arts of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The examiner acknowledges applicant's response to a request to correct the informalities in the preliminary amendment.
